

IC SPICY

IC SPICY X Spaces Script

A one-hour room for casual conviction and professional credibility.

For founder-hosted X Spaces, AMAs, and ICP community rooms.

Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

Room Title

Can a Florida Pepper Nursery Outshine Big Seasoning?

Subtitle: rare peppers, chef-built flavor, ICP provenance, and the mission to take IC SPICY from farm trays to grocery shelves.

0:00-3:00 - Welcome

Appreciate everyone pulling up. Tonight I am talking IC SPICY: rare peppers, chef-designed artisan seasonings, ICP provenance, and the mission to build a seasoning brand that can stand next to McCormick and Kinder's without blinking.

This room is casual, but the mission is serious. We are talking food, farming, flavor, retail, and blockchain as a proof layer.

3:00-8:00 - Founder Story

Talk about the 30 years of growing experience, Zone 10a Southwest Florida, FDACS nursery credibility, rare pepper genetics, and why heat became a personal obsession.

Explain the chef angle: luxury fine dining mindset, ACF award-winning chef influence, and the idea that heat should be balanced, not just painful.

8:00-15:00 - Market Setup

Spices and seasonings are a massive global category. Premium, bold, spicy, smoked, swicy, clean-label, and global flavors are all trending.

McCormick naming Aji Amarillo flavor of the year validates the chili-forward direction. Kinder's proves that a modern seasoning brand can capture grocery attention quickly.

The opportunity is to bring origin, chef craft, and digital proof to a category that still has too many anonymous jars.

15:00-25:00 - Product Vision

Explain the full stack: seedlings, plants, spices, salts, PepperHead NFTs, QR provenance, weather/lifecycle history, community, CookBook, and future SpicyAI.

Keep repeating the plain-English value: this is a real food brand with technology that proves the story.

25:00-35:00 - Why ICP

Rare. Hot. Alive.

ICP lets the project host the app, assets, identity, wallet flows, NFTs, provenance records, and canister logic on-chain.

Do not over-technicalize. Say: the chain helps us make claims verifiable instead of asking customers to just trust a label.

35:00-45:00 - The Big Ambition

Say the bold part clearly: McCormick owns legacy. Kinder's owns modern mass-market seasoning energy. IC SPICY is going after luxury heat: chef-built flavor from real peppers with proof behind the plant.

Acknowledge the climb: national grocery shelves require retail proof, margins, compliance, packaging, production, and velocity. The strategy is DTC first, specialty retail second, regional grocery third, national after proof.

45:00-55:00 - Q&A Prompts

- What flavors would you want first?
- Would you scan a QR code on a spice jar to see where the peppers came from?
- What makes you trust a premium seasoning brand?
- Would you rather buy plants, spices, or membership first?
- What would make you replace your current seasoning brand?

55:00-60:00 - Close

If you want early access, follow IC SPICY, share the room, and watch the build. This starts with rare peppers in Florida, but the goal is grocery shelves everywhere.

Rare. Hot. Alive.
