

IC SPICY

IC SPICY Investor Memo

A deeper written narrative than the pitch deck.

For strategic backers, grant reviewers, and ecosystem partners.

Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

Thesis

IC SPICY has two linked opportunities: a premium physical CPG brand and an ICP-native RWA provenance platform. The physical products create mainstream demand; the blockchain layer creates trust, membership, transparency, and defensible community infrastructure.

Market Timing

Premium seasoning, bold heat, global flavor, chef-inspired pantry upgrades, and specialty food discovery are all moving in IC SPICY's direction. McCormick validates chili-forward trends; Kinder's validates that challengers can grow quickly with the right flavor and retail strategy.

Moat

The moat is founder-market fit: 30 years of Zone 10a growing experience, rare pepper access, chef-built blend development, a real nursery operation, and a software system that turns agricultural lifecycle data into customer-facing provenance.

Risks

Retail distribution is expensive, token claims require legal discipline, solo-founder bandwidth is finite, and national grocery ambitions require production, insurance, packaging, compliance, trade spend, and velocity proof.

Use of Support

Strategic support should focus on audit readiness, retail packaging, production SOPs, chef collaborations, community growth, and warm introductions to ICP and specialty food partners.
