

IC SPICY

IC SPICY Grant Application Packet

A reusable narrative for ecosystem and small-business funding.

For ICP grants, agriculture innovation programs, local business support, and pitch competitions.

Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

Project Summary

IC SPICY combines specialty agriculture, premium food CPG, and blockchain provenance to modernize how rare plants and pepper products are sold, verified, and experienced.

Innovation

The project applies ICP-native infrastructure to living agricultural assets: plant lifecycle records, certified NFT assets, self-custody wallet payments, QR claims, and weather provenance.

Economic Impact

The project can support local agriculture, specialty food production, chef collaborations, online sales, retail accounts, and digital community growth from Southwest Florida.

Funding Priorities

Audit readiness, food packaging and compliance, production scale-up, retail demo support, provenance UX, and public education around RWA utility.

Outcomes

Deliver a working dapp, launch premium seasoning SKUs, establish early retail accounts, document provenance use cases, and publish transparent progress updates.
