IC SPICY NFT Collector Guide

NFT collection, rarity, provenance, and utility explained.

For NFT buyers and IC-native users.

Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

Collection

8888 ICRC-7 NFTs with rarity tiers: Common, Uncommon, Rare, and Founder. Static art and metadata are paired with future live provenance and ownership history.

Utility

Discount tiers, claim flows, PepperHead benefits, future burn redemption, and access to provenance-linked experiences.

Provenance

The long-term goal is for plant-linked NFTs to show lifecycle data such as variety, germination, transplant, sale, claim, and weather snapshots where applicable.

Custody

Self-custody is central. Internet Identity handles app login, while wallet connection handles explicit financial actions.

Collector Reminder

Buy because you value the brand, art, utility, and community. Do not buy based on expectations of profit.
