

IC SPICY

IC SPICY Founder Operating Plan

A weekly cadence for a solo grower-builder.

For balancing code, farming, production, marketing, and retail.

Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

Weekly Blocks

Two focused coding blocks, two farm/production blocks, one content batch block, one sales/outreach block, and one admin/compliance block.

Daily Minimums

Capture one useful piece of content, answer customer/community messages, check priority tasks, and move one revenue or launch item forward.

Do Not Overbuild

Avoid adding features that do not help launch, sell, verify, or support the product. Focus on revenue, trust, and proof.

Monthly Review

Review cash, inventory, content output, DTC sales, retail leads, technical progress, and next bottleneck.

Founder Health

A solo founder cannot run at emergency pace forever. Build repeatable systems, not constant heroics.
