

# IC SPICY

## IC SPICY Food Safety and Claims Checklist

A practical guardrail for labels and marketing.

For packaging, ads, web copy, and public claims.

**Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.**

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

## Review Required

Organic, pesticide-free, non-GMO, gluten-free, allergen-free, health benefits, medical effects, lab-tested, award-winning, chef-certified, and provenance-certified claims should be reviewed before publishing.

## Food Safety Basics

Document batch dates, ingredients, suppliers, sanitation, packaging, storage, complaints, recalls, and lot codes.

## Label Basics

Product identity, net weight, ingredients, allergens, business name/address, nutrition panel if required, UPC, lot code, and best-by guidance.

## Marketing Discipline

Say what is true and provable. If a claim depends on future tech, say planned or future, not live.

## Legal Reminder

This checklist is not legal advice. Use qualified food compliance and legal review before retail scale.
