

# IC SPICY

## IC SPICY Mainnet Launch Checklist

Operational checklist for production deployment readiness.

For ICP launch planning and internal discipline.

**Farm-grown heat. Chef-built flavor. Blockchain-backed provenance.**

Prepared May 2026 - Draft marketing material; legal review required before public token claims.

## Before Deploy

Read PROJECT\_CONTEXT.md and AGENTS.md, fetch relevant ICP skills, complete local tests, verify admins, verify canister IDs, confirm cycles, and review upgrade risks.

## Security

Authenticated methods guarded, admin methods protected, CallerGuard on async settlement, no hardcoded secrets, no frontend-trusted prices, and no user content in Debug.print.

## Assets

Frontend built, NFT assets verified, certified paths used, raw access policy reviewed, metadata templating correct, and upload scripts tested.

## Comms

Publish launch notes, privacy policy, terms, risk notes, support channel, known limitations, and no token claims beyond reviewed disclosures.

## After Deploy

Run smoke tests, verify queries, check cycle balances, record module hashes, archive release notes, and monitor errors and customer reports.
